

West Africa Coastal Areas Resilience Investment Project 2

2023 - 2028

World Bank

Western and Central Africa (Guinea Bissau and Ghana)

NATURE BASED SOLUTIONS

coastal wetlands (excluding mangroves)

This project aims to enhance climate resilience in the coastal areas of Western Africa by targeting regional coordination, policy frameworks, and site-specific physical and social investments. It focuses on regional integration by harmonizing coastal governance policies and strengthening institutional collaboration to address resilience challenges. At the national level, the project supports operationalizing integrated coastal zone management plans and land-use strategies for effective management of transboundary ecosystems. Green, grey, and hybrid infrastructure investments will address coastal erosion, flooding, and ecosystem restoration.
