

Climate Resilient Participatory Afforestation and Reforestation Project

2013 - 2017

World Bank
Bangladesh

NATURE BASED SOLUTIONS

forests, mangroves

The project increased the afforested/reforested areas through participatory forestry and co-management approach in the degraded forestland, marginal, fallow and newly accreted land in coastal and hilly areas. This included the use of mangroves and other species. The project also used alternative livelihoods and capacity building to support the work.
