

Community Action Project for Climate Resilience

2012 - PRESENT

World Bank

Ministry of Planning, Territorial Management and Community Development, Niger

Niger

NATURE BASED SOLUTIONS

sustainable management

The Government of Niger recognizes the importance of holistic land and water resource management to improve local population's resilience to drought and flood. To this end, the Community Action Project for Climate Resilience project was established with World Bank support. It aims to achieve this by mainstreaming climate resilience into development strategies at national and local levels, and by integrating climate resilience practices into agro-sylvo-pastoral systems and local populations' social protection measures.
