

Wetlands Conservation and Coral Reef Monitoring for Adaptation to Climate Change

2012 - 2014

World Bank

Ministry of Housing and Environment, Maldives

Maldives

NATURE BASED SOLUTIONS

coastal wetlands (excluding mangroves), mangroves

The objective of this pilot-scale project is to 1) to strengthen the institutional capacity of the Ministry of Housing and Environment and local councils in planning and demonstration of community based wetland management, and 2) to implement a coral reef monitoring system. The Government of the Maldives will achieve this through the components Wetland Conservation and Water Resources Management, Coral Reef Monitoring and supporting project management, financed under the multi-donor Climate Change Trust Fund.
