

Benin - Stormwater Management and Urban Resilience Project

2019 - 2026

Benin

NATURE BASED SOLUTIONS

grassland and other vegetation, ponds, lakes, small water bodies

The objective of the Stormwater Management and Urban Resilience Project for Benin is to reduce flood risks in selected areas of Cotonou and strengthen urban resilience management and capacity at the city level. There are three components to the project, the first component being storm water drainage investment and community engagement for flood risk reduction and climate change adaptation. The second component is the strengthening urban resilience management and capacity. Finally, the third component is the project management, monitoring and evaluation. The project will use vegetated slopes and retention pods to decrease flood risks in the city.
