

Bolivia Climate Resilience - Integrated Basin Management

2015 - 2021

World Bank

Bolivia

NATURE BASED SOLUTIONS

watershed management, sustainable management

The development objective of the Climate Resilience - Integrated Basin Management Project for Bolivia is to support the implementation of Borrower's strategic program for climate resilience by: (a) strengthening the Borrower's institutional capacity to define the new integrated river basin management approach to climate change adaptation; and (b) supporting its implementation in three pilot sub-basins in the Rio Grande basin. The project improved natural resources management through the implementation of land and water conservation sub-project such as reforestation/re-vegetation, restoration of gullies, and improved farming practices.
