NATURE BASED SOLUTIONS

urban green spaces

The objective of the Accelerating Results in Education Project for Central African Republic is to improve access to quality basic education and strengthen capacity for sector management. There are four components to the project, the first component being Increase access to improved learning environments. This component includes four subcomponents: targeted schooling infrastructure, targeted schooling infrastructure, supporting learning opportunities for out-of-school children, and school grant and girls' education initiative. The second component is the improve teaching quality. This component includes three subcomponents: support teachers' in-service training in basic education, strengthen preservice teacher training, and increase qualified primary teachers in the system. The third component is the strengthen data system and sector management. This component includes three subcomponents: learning assessments, strengthen education planning and management, and project management and capacity building. Finally, the fourth component is the Contingent Emergency Response Component (CERC). This project will construct resilient school buildings, including by incorporating green spaces and tree planting on school compounds to mitigate heat and other climate hazards.
